Overview

The 2012 Configuration Workshop continues the series of 14 successful Configuration Workshops started at the AAAI’96 Fall Symposium and continued on IJCAI, AAAI, and ECAI since 1999.

The main goal of the workshop is to promote high-quality research in all technical areas related to configuration. The workshop is of interest for both researchers working in the various fields of applicable AI technologies mentioned below as well as for industry representatives interested in the relationship between configuration technology and the business problem behind configuration and mass customization. It provides a forum for the exchange of ideas, evaluations and experiences especially in the use of AI techniques within these application and research areas.

Areas of interest

- **Configuration problems and models**
  structure of configuration problems, knowledge representation, fuzzy and incomplete knowledge, knowledge base verification, validation and diagnosis, standardization of catalog exchange formats, configuration problems, including discrete, continuous and mixed constraints; product and process configuration; product design and configuration; software product line configuration.

- **Techniques for obtaining and/or maintenance of configuration models**
  knowledge acquisition methods, cognitive approaches, machine learning, data extraction methods, ontology integration, reconciliation of knowledge bases, knowledge elicitation.

- **Reasoning methods**

- **Interactivity and e-business**
  personalization, ontology, intelligent human computer interaction, machine learning, client/server architecture, configuration web service, distributed configuration, configuration process modeling.

- **Applications and tools**
  configuration tools, design tools, application reports, case studies, real-world challenges, test environments for configuration knowledge bases, configuration in related fields like software configuration, service composition, Model-Driven Engineering (MDE), Model Transformation, Model Satisfaction and Test Case generation for component-based software construction.

Submission

We invite original contributions in form of a full paper of no more than 8 pages. Position statements and problem instances can be submitted as short papers limited to 4 pages. Both regular and short papers should be formatted according to ECAI guidelines. At least one author should attend the workshop to present the paper.
